AVG Surgical
Gonio Lens

Revolution

in Microinvasive Glaucoma Surgery.

For better control, comfortable positioning, clearer image and minimal corneal pressure, choose the **AVG Surgical Gonio Lens** for Micro Invasive Glaucoma Surgery (MIGS) and other intraoperative surgical gonio procedures.

- > Stabilizes and controls the globe with Thornton-style fixation ring
- > Floating lens minimizes pressure on the cornea to maintain a clear view without anterior chamber distortion
- > Visualizes angle in primary phaco position with minimal microscope & head adjustments – results in less physician discomfort compared to traditional surgical Gonio lenses
- > Ambidextrous design
- > The AVG is compatible with both steam and gas sterilization and its durable construction withstands repeated gas or steam sterilization cycles with no degradation in image quality

Developed in collaboration with: **Alcon**® + Dr. Steven D. Vold
